

MACOLA UTILITIES

THE PROBLEM

Attivo developed utilities specifically to correct and enhance the Macola database system. All of these utilities have been developed for the following reasons:

- All versions of Macola require system maintenance to keep it running efficiently.
- There is little or no documentation available for system maintenance.
- Macola continues to slow down overtime.
- Many processes are not adequate and just stop working.
- We understand there is only so much Macola can do out of the box so we took customer requests and developed many utilities that can be sold perpetually or via subscription.

THE SOLUTION: MACOLA UTILITIES

- **Database Health Checks:** Highly skilled Macola consultants perform a DHC to your entire Macola system to evaluate the current system and data errors.
- **Pulse Archive (Leahy Consulting):** This utility increases performance levels by improving speed (for reporting, look-ups, MPR processing, etc.), creating data archives, and allows flexibility when keeping various kinds of data in your live company.
- **Item and Location Delete and Restore:** Removes unnecessary data from your Macola system, allows for easier look-up capabilities, creates fewer items to maintain, and is perfect for MTO environments with many obsolete items (only available for Macola ES).
- **Reset on Order/Reset Allocations:** Replace the standard Macola functionality which now will complete in seconds rather than hours, can be run with users in the system, and we can even set up the utility to run on a regular schedule.
- **Inventory Freeze:** This utility only takes seconds and is for cycle and physical counts, perfect for month end processing. Use the Freeze Inventory process to “freeze” the cost and quantity on hand values as of a certain date, usually at the end of a period.

MACOLA UTILITIES

- **Reporting Optimization:** Helps to fix reports that take too long to run, rewrite of query logic to optimize reporting speed, crystal reports or SSRS, and assistance with report distributions.
- **Database Purge and Archive:** Pulse archive speeds processing by archiving old data from your business. Removes unneeded data from your Macola database and archives it to another Macola database in case you need it.
- **Item Import:** This utility allows adding many new items or new customers or vendors from an Excel worksheet. Save hours of data entry with this easy-to-use import tool.
- **Mass Item Number Change:** Replaces an item number to another number, anywhere it may appear in the system. Searches through all tables in Macola as well as any custom tables where the item exists and replaces them.
- **Merge Customer/Vendor Accounts:** This utility allows you to merge duplicate customer or vendor accounts, consolidate accounts due to acquisition, and combine separate accounts into a single account with multiple shipping addresses, for both Macola and Synergy systems.
